**ABSTRACT OF THE DISCLOSURE**

A gun type main game machine including a light gun connecting with an image, sound and power line, the light gun is mounted therein in pursuance of the shape thereof a main electric circuit board for games, the main electric circuit board is provided with a single chip microprocessor, a microswitch, a plurality of light emitting diodes and a photoelectric diode. A shank of the light gun is provided with an exposed trigger for controlling the microswitch to activate the photoelectric diode to thereby eject light beam out of the muzzle of the light gun. In this mode, the game machine can control electric games only with the single light gun to thereby save using a conventional large main game machine.
